

# CanOils Oil Sands Module

The CanOils **Oils Sands** module provides **key data and analysis** from a "by company" or "by project" perspective for the entire Oil Sands industry.

Oil Sand operators are able to complete both internal and industry benchmarking for all **in-situ, mining and up-grading projects**. Having the most **current project status**, statistical data and company financials in one place saves valuable time for future analysis.

The **CanOils Database Ltd.** provides an innovative web-based software program which captures key data and analysis for the **oil sands** sector allowing users to be more efficient, **more accurate and more successful** in their daily comparisons and calculations.

## Product Features

Complete peer group comparisons and industry analysis

Monthly production and cost comparisons including; operating, capital intensity and netbacks

Regulatory timings complete with applications, SIR's and decision documentation

Provides all technical analysis and in-situ efficiency measures including; SOR's, water/steam ratios, and recycle ratios

View full profiles for all projects in the oil sands sector

Deal metrics for all oil sands M&A activity

Latest project news - updated daily
